Observations

1. This is one of several quipus acquired by the Museum in 1907 with provenance Ica. For a list of these quipus, see AS100.
2. AS141 and AS142 are designated by the same Museum number.
 - (a) Both quipus have the main cord and all pendants the same color, W.
 - (b) Both quipus are separated by spacing into groups of a uniform number of pendants: on AS141 there are 10 groups of 2 pendants each; and on AS142 there are 2 groups of 6 pendants each.
 - (c) On AS141, all values are 20-24; on AS142, all values are 0-15.
3. On AS141, the sum of the values of the first pendant in each group equals the

sum of the values of the second pendant in each group. That is,

$$\sum_{i=1}^{10} P_{i1} = \sum_{i=1}^{10} P_{i2}$$

4. In 8 of the 10 groups, the value of the first pendant equals the value of the second pendant. Moreover, these values are the same for 7 of the 8 groups.

That is,

$$P_{i1} = P_{i2} \quad i=1,3,5,6,\dots,10$$

$$P_{i1} = P_{i2} = 22 \quad i=3,5,6,\dots,10.$$
