Observations

1. AS87, 89, 90, 92, 93, 94 are associated in that the Museum designates them all as donated by Gaffron, and gives Peru as the provenance. For a comparison of them, see AS87.
2. By spacing, AS92 is separated into 10 groups. The first 8 groups each have 6 pendants with the same color pattern (W, MB, MB:W, W, W, W).
3. In all 10 groups, the first pendant has maximum value.
4. Position by position, the pendant values in group 1 are larger than those in group 4, which are larger than those in group 3, which are larger than those in group 2. That is

$$P_{1i} > P_{4i} > P_{3i} > P_{2i} \quad i=1,2,\dots,8.$$

5. In a few cases, the sums of values in the same position in pairs of consecutive groups are equal. Namely,

$$P_{4i} + P_{5i} = P_{6i} + P_{7i} \quad i=1,4$$

$$P_{2i} + P_{3i} = P_{6i} + P_{7i} \quad i=4,6$$
